

# HIV+ people!

## Boehringer Ingelheim is working for you!

Tens of thousands of HIV positive people are failing treatment: the anti-retrovirals available today do not work anymore for them! These patients are in an urgent need of new treatment options, such as tipranavir/r, a medication that is being developed by Boehringer Ingelheim for patients in need of salvage therapy.

Boehringer Ingelheim's proposed compassionate access programme to tipranavir/r is insulting to us as it makes only 600 treatments available until mid-2004 for the entire world!

After Roche and its very limited access to T-20 before market approval, Boehringer Ingelheim is digging the graves of very sick patients who could benefit of a new treatment option.

**EATG and TRT-5 demand that Boehringer Ingelheim makes tipranavir/r available to anyone desperately needs it now.**

TRT. **5**
